

Open position

Cognitive Neuroscientist for Artificial General Intelligence R+D project.

We are looking for a **PhD in Cognitive Neuroscience** to be incorporated to the R+D team of the company. He/she will be in charge of providing the technical team with neuroscientific approaches for trying to solve the design challenges of a new Cognitive Architecture for AGI. Any complementary knowledge related to Artificial Intelligence technology will be positively valued.

The MindKind is a startup located in the Bidasoa Valley, in the heart of the Spanish Pyrenees. Built upon an innovative neuroscientific model, we are focused on developing **Algorithmic Artificial General Intelligence (AAGI) systems**, that is, computational systems capable to learn, reason, take decisions and behave as humans do.

During the next two years (2022-2023), we will execute a **NEOTEC** project for the development of the Minimum Viable Product (MVP) of an AAGI engine. Through an SDK and an API, it will allow videogame and virtual environment developers (e.g. UNITY / UNREAL) to create intelligent and autonomous avatars and NPCs, capable of being mistaken for a human within those #VR environments.

The job is on-site and full-time, with a gross salary of 36,000 € / year, plus a 1% stake of the company at the end of the project (December 2023).

On-site working is necessary, as the company is not only developing worldclass #AAGI technology, but also doing so through a **transdisciplinary** research approach. This methodology involves a dynamic environment where ideas are explored together. Nature and quality of life are also important facets of the project, as they are the basis for deep intellectual work.

The project constitutes a "pilot project" for a future transdisciplinary research center, focused on finding new ways to solve complex scientific challenges and the seed of a more ambitious endeavour to improve scientific and technological R+D+i, together with the development of a new economic and sustainable model for rural areas.

If interested, please contact us by sending CV and motivation email to:
